# SPIE Fundamentals of Optics

## Table of Contents

**Module 1.1** Nature and properties of light: General Introduction  
   Objectives 2  
   Opening Demo 3  

Basic Concepts  
   A. Intro to photonics 5  
   B. Phontonics opportunities 5  
   C. Properties of light 6  
      Dual nature of light 7  
      Wave model 9  
      Polarization 12  
      Huygens’ Principle 14  
      Superposition 14  
      Reflection 15  
      Refraction 16  
      Diffraction 16  
      Interference 17  
   D. The electromagnetic spectrum 18  
      Spectra of light sources 20  
      Atomic spectra 21  
      Molecular spectra 23  
   E. Blackbody radiation 23  
   F. Interactions of light with matter 26  
      Absorption 26  
      Scattering 26  

Laboratories 28  
   Lab 1.1A Finding the speed of red light in optical-grade plastic 28  
   Lab 1.1B Determining the wavelength of red light 32  
   Lab 1.1C The spectrum of colored light 33  
   Lab 1.1D The polarization of light 35  

Problems/Exercises 37  

Metric prefixes 38  

**Module 1.2** Light sources and laser safety: General Introduction  
   Objectives 40  
   Opening Demo 41  

Basic Concepts  
   I. Nonlaser light sources 42  
      A. Incandescent sources 45  
      B. Fluorescent light sources 46  
      C. High-intensity discharge lamps (HID) 46  
      D. Flashlamps and arc lamps 47  
      E. Light-emitting diodes (LED) 47
II. Concepts of laser safety
   A. Eye hazards
   B. Absorption of radiation by the eye
   C. The skin
   D. Laser safety standards and safety classifications
      Laser hazard classifications
      Types of controls: Engineering, Administrative, Personal Protective
      Maximum permissible exposure (MPE)
      Absorption, Lambert’s Law, and optical density
      Laser safety signs
      Laser accidents
      ** Safety rules for all lasers, regardless of output power level
      Nonbeam hazards
      Fire hazard
      Explosion hazard
      Electrical hazard
      Chemical hazards

Laboratories

2.1A Power in irradiance of a HeNe laser beam
2.1B Irradiance of a diverging beam

Other Resources

Problems/Exercises

---

Module 1.3 Basic geometrical optics
   Objectives
   Opening Demos

Basic Concepts

I. The laws of reflection and refractions
   A. Light rays and light waves
   B. Reflection of light from optical surfaces
      1. The law of reflection: plane surface
      2. Reflection from a curved surface
   C. Reflection of light from optical interfaces
      1. Index of refraction
      2. Snell’s Law
      3. Critical angle and total internal reflection (TIR)
   D. Refraction in prisms
      1. Minimum angle of deviation
      2. Dispersion of light
      3. Special applications of prisms

II. Image formation with mirrors
   A. Images formed with plane mirrors
   B. Images formed with spherical mirrors
      1. Graphical ray-trace method
      2. Key rays used in ray tracing
C. Mirror formulas for image location
   1. Derivation of the mirror formula
   2. Sign convention
   3. Magnification of a mirror image

III. Image formation with lenses
   A. Function of a lens
   B. Types of lenses
      1. Converging and diverging thin lenses
      2. Focal points of thin lenses
      3. \( f \)-number and numerical aperture of a lens
   C. Image location by ray tracing
   D. Lens formulas for thin lenses
      1. Equations for thin lens calculations
      2. Sign conventions for thin lens formulas

Laboratory
   Lab 3.1A Index of refraction of a prism material
   Lab 3.1B Total internal reflection (TIR)
   Lab 3.1C Index of refraction of a thin lens
   Lab 3.1D Measuring the focal lengths of thin lenses

Other Resources

Problems/Exercises

Module 1.4 Basic physical optics
   Objectives
   Opening Demos

Basic Concepts

I. Light waves and physical optics
   A. Physics of waves and wave motion
   B. The mathematics of sinusoidal waveforms (optional) *

II. Interaction of light waves
   A. The principle of superposition
   B. Huygens’ wavelets

III. Interference
   A. Constructive and destructive interference
   B. Young’s double-slit interference experiment
      1. Detailed analysis of interference from a double slit
      2. Intensity variation in the interference pattern
   C. Thin-film interference
      1. Single-film interference
      2. Single-layer antireflection (AR) coat

IV. Diffraction
   A. Diffraction by a single slit
B. Fraunhofer and Fresnel diffraction 141
   1. Criteria for far-field and near-field diffraction 142
   2. Several typical Fraunhofer diffraction patterns 144
C. Diffraction grating 146
D. Diffraction-limited optics 149

V. Polarization 150
   A. Polarization – a simple analogy 151
   B. Polarization of light waves 152
   C. Law of Malus 153
   D. Polarization by reflection and Brewster’s angle 155
   E. Brewster windows in a laser cavity 157

Laboratory 159
   Lab 4.1A Quantitative mapping of an Airy diffraction pattern 161
   Lab 4.1B Determine the wavelength of light with a reflection grating 161
   Lab 4.1C Conversion of unpolarized light to linearly polarized light 162

Other Resources 163
Problems/Exercises 164

Module 1.5 Lasers 5-1
   Objectives 5-2
   Opening Demos 5-4

Basic Concepts

I. Requirements for a laser 5-5
   A. Laser Gain Medium 5-5
      Population inversion in gases 5-10
      Population inversion in liquids 5-11
      Population inversion in crystalline solids and glasses 5-11
      Population inversion in semiconductors 5-12
      Bandwidth of laser gain medium 5-14
   B. Laser pumping sources 5-15
      Electron pumping
      Optical pumping
   C. Laser beam properties 5-17
      Shape of gain medium
      Growth of beam and saturation
      Longitudinal cavity modes 5-20
      Transverse modes 5-22
      Stable laser cavities or resonators 5-25
      Unstable resonators 5-27
      Q-switching
      Mode locking 5-28

II. Laser properties related to applications 5-29
    A. Collimation
    B. Monochromaticity
C. Coherence 5-30
D. Intensity and Radiance 5-31
E. Focusability 5-31

III. Examples of common lasers 5-32
A. HeNe 5-33
B. Argon ion and Krypton ion 5-33
C. HeCd 5-33
D. Copper vapor 5-33
E. CO₂ 5-33
F. Excimer 5-34
G. Organic dye 5-34
H. Ruby 5-34
I. Nd:YAG and Nd:glass 5-34
J. Ti:Al₂O₃ 5-35
K. Erbium fiber 5-35
L. Semiconductor lasers (solid state) 5-35

IV. Operation of a HeNe laser 5-36
A. Laser structure 5-37
B. Laser operation 5-37
C. Laser beam development 5-38
E. Longitudinal frequency modes 5-39
E. Transverse spatial beam modes 5-39
F. Laser cavity properties 5-39
G. HeNe laser wavelengths 5-40

Laboratories 5-40
5.1 Alignment of laser mirror cavity 5-40
5.2 Laser beam sensitivity to mirror beam alignment 5-40
5.3 Operation of the laser at 632.8 nm with several different laser mirror configurations 5-40
5.4 Single-mode and multimode (transverse or spatial mode) operation 5-40
5.5 Operation of the laser in the green at 543.5 nm 5-40
5.6 Variation of laser power with discharge current 5-40
Problems/Exercises 5-43

Module 1.6 Optical detectors and human vision 211
Objectives 212
Opening Demos 213

Basic Concepts 214

I. Basic information on light detectors 214
A. Role of an optical detector 214
B. Types of optical detectors 216
C. Detector characteristics 216
D. Noise considerations 220

II. Types of detectors 222
A. Photon detectors
   Photovoltaic effect
   Photoemissive effect
   Photoconductivity
   Photodiodes
   PIN photodiodes
   Avalanche photodiodes
   Photomultipliers

B. Thermal detectors
   Bolometers and thermistors
   Thermocouples
   Calorimeters
   Pyroelectric detectors

III. Calibration
   A. Response of detector
   B. Techniques to limit beam power
      Beam splitters
      Lambertian reflectors
   C. Electrical calibration

IV. Circuitry for optical detectors
   A. Basic circuit for a photovoltaic detector
   B. Basic circuit for a photoconductive detector

V. Human vision
   A. The eye as an optical detector
   B. Structure of the eye
   C. Operation of the eye
   D. Color
      Brightness
      Saturation
      Hue
   E. Defects of vision

Laboratory
   Lab 6.1 Measure chopped HeNe laser light
   Lab 6.2 Measure chopped argon laser light
   Lab 6.3 Determine the relative response of detector systems at several wavelengths

Problems/Exercises

Module 1.7 Optical waveguides and fibers
   Objectives
   Opening Demos
   Basic Concepts
   I. Historical Introduction
   II. Total internal reflection (TIR)
## III. The optical fiber 258

## IV. The coherent bundle 260

## V. The numerical aperture (NA) 261

## VI. Attenuation in optical fibers 262

## VII. Pulse dispersion in step-index fibers (SIF) 264

## VIII. Parabolic-index fibers (PIF) or gradient-index fibers (GRIN) 267

## IX. Material dispersion 268

## X. Dispersion and maximum bit rate 271

## XI. Single-mode fibers (SMF) 273
  A. Spot size of the fundamental mode 275
  B. Splice loss due to transverse misalignment 276
  C. Waveguide dispersion 278
  D. Dispersion-shifted fibers 278

## XII. Plastic optical fibers (POF) 278

## XIII. Fiber optic sensors 282
  A. Extrinsic fiber optic sensors 283
  B. Intrinsic sensors 285
    - Mach-Xehnder interferometric sensor 286
    - Fiber optic rotation sensor – the fiber optic gyroscope (FOG) 286

## Laboratory 288
  - Lab 7.1A Multimode and single-mode optical fibers 289
  - Lab 7.1B NA of a multimode optical fiber 289
  - Lab 7.1C Attenuation measurement 289
  - Lab 7.1D MFD (mode field diameter) measurement of an SMF 290
  - Lab 7.1E Splice loss across a multimode fiber joint 290

## Problems/Exercises 291

---

## Module 1.8 Fiber optic telecommunication 293

**Objectives** 294

**Opening Activities** 295

**Introduction** 296

## I. Benefits of fiber optics 296

## II. Basic fiber optic communication system 297

## III. Transmission windows 298

## IV. Fiber optic loss calculations 299

## V. Types of fiber 301

## VI. Dispersion 304

## VII. Analog versus digital signals 307

## VIII. Pulse code modulation 308

## IX. Digital encoding schemes 310

## X. Multiplexing 313
  A. Time-division multiplexing (TDM) 314
    - The digital telephone hierarchy 315
SONET 316
B. Wavelength-division multiplexing (WDM) 317

XI. Components – fiber optic cable 319
   Indoor cables
   Outdoor cables

XII. Fiber optic sources 321
   LEDs 322
   Laser diodes (LD) 324

XIII. Packaging 325
XIV. Direct versus external modulation 326
XV. Fiber optic detectors 328

XVI. Fiber optic system design considerations 330
   A. Power budget
   B. Bandwidth and rise time budgets 332
      Electrical and optical bandwidth
   C. Connectors 334
      Snap-in connector (SC)
      Twist-on single-fiber connectors (ST and FC)
      Duplex connectors
   D. Fiber optic couplers 335
      Transmissive type 336
      T-couplers 337
   E. Wavelength-division Multiplexers 338
      Erbium-doped fiber amplifiers (EDFA) 339
      Fiber Bragg gratings

What’s ahead? 341

Problems/Exercises 342
Laboratory 343
   Lab 8.1 Making a fiber optic coupler
   Lab 8.2 Wavelength-division multiplexing demonstration 344
   Lab 8.3 Measuring coupler loss 346

Module 1.9 Photonic devices for imaging, display, and storage 349
   Objectives 350
   Opening demonstration 351

Basic Concepts

I. Introductory concepts 352
   A. Sampling theory 352
      Pixels 353
      Resolution and spatial frequency 355
   Lab 9.1 Resolution 358
   B. Imaging Systems 358
Cameras 359
Lab 9.2 Camera 361
Scanners 361
Lab 9.3 Scanners 363
Files 364
Lab 9.4 Image files 366

II. Imaging devices 366
A. CCD cameras 368
  Structure 368
  Capabilities 368
B. Vidicons 369
  Structure 369
  Capabilities 370
C. Image intensifiers 371
  Structure 371
  Capabilities 371
Lab 9.5 Image intensifier

III. Display devices 371
A. Intro to cathode-ray tubes (CRT) 372
  Construction 372
  Capabilities 372
B. Flat-panel liquid-crystal displays 373
  Liquid-crystal theory 373
  Passive-matrix liquid-crystal displays 375
  Active-matrix liquid-crystal displays 376
C. Flat-panel electroluminescent displays 377
D. Flat-panel LED displays 377

Looking toward the future

Laboratory 377
   Lab 9.1 Determine the resolution of a CCD camera
Problems/Exercises 380

Module 1.10 Basic principles and applications of holography 381
   Objectives 382
   Opening demonstration 383
Basic Concepts

I. Types of holograms 384
   A. The reflection hologram 385
   B. Transmission holograms 385
   C. Hybrid holograms 385

II. The physical basis of holography 386
   The physical model 386
      Two-point source interference
