**Project 1**

- Using the systematic procedure described in your text develop your own figures similar to Exhibits 69, 70, 71 and 73.
- Give a brief description in words of what you think happened.
- Use the photos as well as the after collision situation map to assist your effort. This info may be found on the instructor’s website.
- You must use a CAD package to do this project – Solidworks or you can try to use Visio – if you can create damaged profiles for the cars.
- The two vehicles were a 1996 Cavalier and a 2003 Impala.
